guide to choosing a barbecue: which fuel should I use?

When choosing a barbecue it's important to keep in mind the type of fuel you want to use. There are wood, charcoal and gas barbecues available in our range.

WOOD BARBECUES

Wood gives a unique aroma and an unmistakable flavour to food. Cooking on a log fire is the real way to grill food but this takes a certain amount of experience and patience.

In fact, it takes at least an hour to make hot coals from wood which means that the barbecue must be lit in due time. Moreover, the production of hot coals and the distance between them and the grill must be mastered. All our barbecues are provided with channels at different heights to adjust the position of the grill and with a wood brazier in which the hot coals are produced.

Lastly, it's important to remember that a log fire produces a huge amount of heat which may damage the product in the long run unless it's produced respecting very high quality standards. The firebox and grill area of our barbecues is strengthened to withstand log fires and many of our models also come with a metal guard which protects the hood from the heat of the combustion fumes. These construction features make our barbecues suitable for cooking on a log fire and for frequent use as well as guaranteeing that they last a really long time.

CHARCOAL BARBECUES

It takes the same amount of time to produce hot coals from charcoal as it does to produce them from wood. Charcoal does give food a special aroma though and, since it needs plenty of air to burn well, it is a good idea to light it and place it on top of perforated grills. Our barbecues come with a special ash pan benefiting from a system that favours charcoal combustion and hot coal production.

GAS BARBECUES

If simplicity of use is particularly important, a gas barbecue would probably be preferable. These products are very easy to turn on (just like a domestic hob) and don't require any special experience or attention to cook on. Our gas barbecues are made from stainless steel; some are countertop models while others come on wheels. Compact, light, easy to transport and moderately-sized, they are ideal for terraces, balconies and small spaces in general.

Cooking techniques

grilling

No matter whether you use wood or charcoal, it's always exciting to light a blazing fire and it makes you want to start cooking straight away! You must be patient though and wait for a thin layer of white ash to cover the hot coals before putting your food on the grill, which must be at the right cooking temperature: high for large pieces of meat, medium for fish in general and low for vegetables. If you follow this tip you will prevent fats from dripping from the food onto the hot coals, which causes flares that produce harmful substances for our health. Charred food should never

be eaten! The grill you choose is also important for optimal results: a steel grill made of round bars is preferable for lean meats while a flat-bar grill that also collects the tasty fats and juices is ideal for other types of food.

baking or roasting

Opening an oven door and being blown over by the intense and "crispy" smell of the food this appliance always enhances the flavour of is a priceless experience! Nevertheless, this result is only guaranteed if we do things properly: a refractory oven must be heated slowly for at least a couple of hours; if the cooking process is particularly long, it's a good idea to leave a small fire going or some red hot coals inside the oven. You should start by cooking pizzas, breads, roast meats, lasagne or baked pasta dishes that require high temperatures and end with food like cakes and biscuits that bake at a gentler heat. You need to be

patient with yourself when learning to use an oven because it's not easy to determine the ideal cooking times or temperatures straight away but, once you have learnt, the results will be unbeatable!

on a lava stone slab

Cooking on a lava stone slab is one of the oldest and most wholesome techniques. Indeed, these materials feature high thermal conductivity which means that they can be used on an open flame, albeit at a reasonable distance from the fire to avoid cracking the slab and to prevent overheating which would ruin the food being cooked. This cooking technique is completely natural because it doesn't require additional fats or condiments; it's quick because there is no need to wait for hot coals to be produced to start cooking; it's healthy because the food never comes in contact with the fire or fumes; it's suitable for any food including meat, fish, vegetables and cheeses and....for any cook, even the most scatter-brained, because it's really hard to "burn" your food! A sharp, stainless steel turner is the only kitchen utensil you will need for this cooking method.

spit roasting

This ancient technique makes food very tasty and is suitable for roasting whole animals (chickens, turkeys, ducks, rabbits or even kids and pigs, large fish and any other food you can imagine) and an assortment of foods together such as different types of meat and vegetables that can be alternated as desired. It's undoubtedly a very healthy cooking method because it uses the heat radiated by the fire. It's up to the cook and to his experience to determine the right distance from the fire as well as its intensity to avoid burning the food. It's also a lengthy cooking process – probably taking several hours – and requires some attention: nevertheless, you will be rewarded by unforgettable results! A wet drip tray is indispensable to prevent the fats dripping off the food from falling onto the hot coals.

materials

A perfect structure must satisfy both aesthetic and functional demands. A combination of quality materials is required to achieve these results.

For our barbecues we use:

1. Cement mix
2. Marmotech

This is the secret of a product that is sturdy, practical and requires very little maintenance.

A product that will cook a great quantity of grilled delights!

1. CEMENT MIX

Consisting of a mixture of prime-quality cement, aggregates and refractory materials. Our cement mix barbecues are supplied unfinished together with a painting kit. They must be coated with the special wall

paint supplied that is particularly thick, waterproof and protects the barbecue from the elements and wear.

MASS-COLOURED CEMENT MIX

Some of our barbecues have a mass-coloured cement mix top. These do not need to be painted but, once the barbecue has been assembled, it's sufficient to coat them with a protective, transparent liquid which is included in the kit delivered together with the barbecue.

MARMOTECH

A mixture of granulated marble creates an innovative material with very high thermal resistance, that doesn't require a finishing coat of paint. It is sufficient to apply our transparent protective liquid. It is available in two versions with a particularly velvety feel: with a polished, grey granite effect (A) and with a polished, red granite effect (B). Almost all our barbecue tops are made of Marmotech.

A POLISHED GREY GRANITE EFFECT

B POLISHED RED GRANITE EFFECT

technologies

It's the functions that make a substantial difference to real professional grill masters . That's why our barbecues are designed to be functional in every detail.

1. METAL HOOD GUARD

It strengthens and protects the hood from the heat of the wood combustion fumes for an even longer-lasting barbecue.

3. REAR OR SIDE FIREWOOD LOADING

To load the firewood even more safely and make cooking operations easier.
Available for some selected models.

2. FAST-FIRE BOX SYSTEM

A special ash pan with an air flow that improves charcoal combustion and makes cleaning easier after the fire has gone out.

4. FIREBOX WITH SIDE BRAZIER

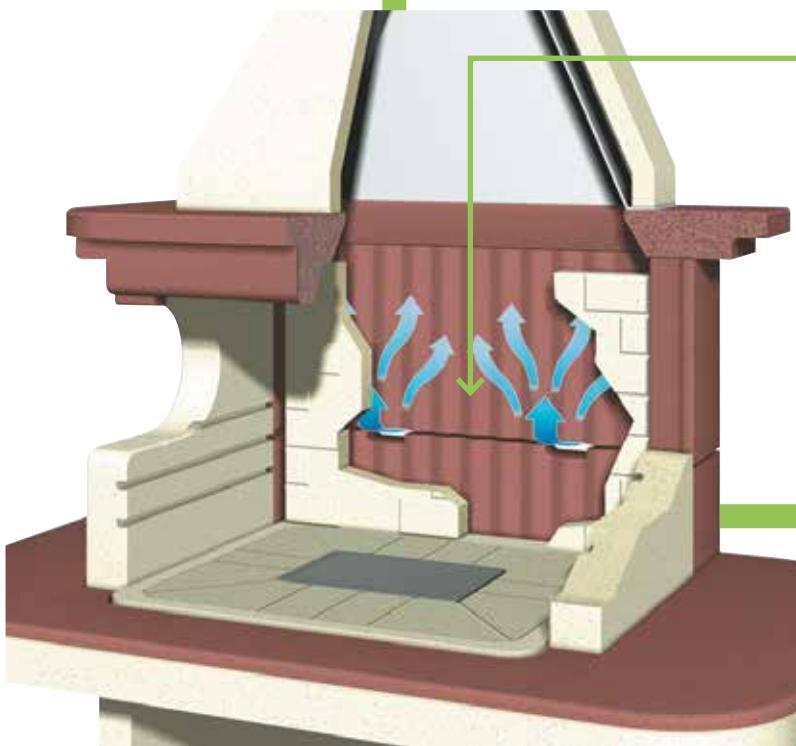

To completely exploit the grill area without wasting an inch and to cook in total safety, shielded from the reflected heat of the fire, the side brazier also makes it a lot easier to continuously produce hot coals for the entire duration of the cooking process.

5. FIREBOX AND GRILL AREA STRENGTHENED TO WITHSTAND LOG FIRES

Those who like to use their barbecues frequently and prefer wood to charcoal are obliged to choose products with a firebox and grill area strengthened to withstand the heat produced by a log fire. That's why some of our models are made with fireboxes strengthened by a double wall with natural, rear ventilation and a grill area with a refractory floor and insulated padding.

The back firebox wall, the part of the barbecue subjected to the greatest heat, is made of four panels (two external, horizontal ones and two internal, vertical ones) with a gap that lets the external air through to prevent the whole structure from overheating.

ovens

An oven is essential for even richer flavours and an unmistakable aroma.

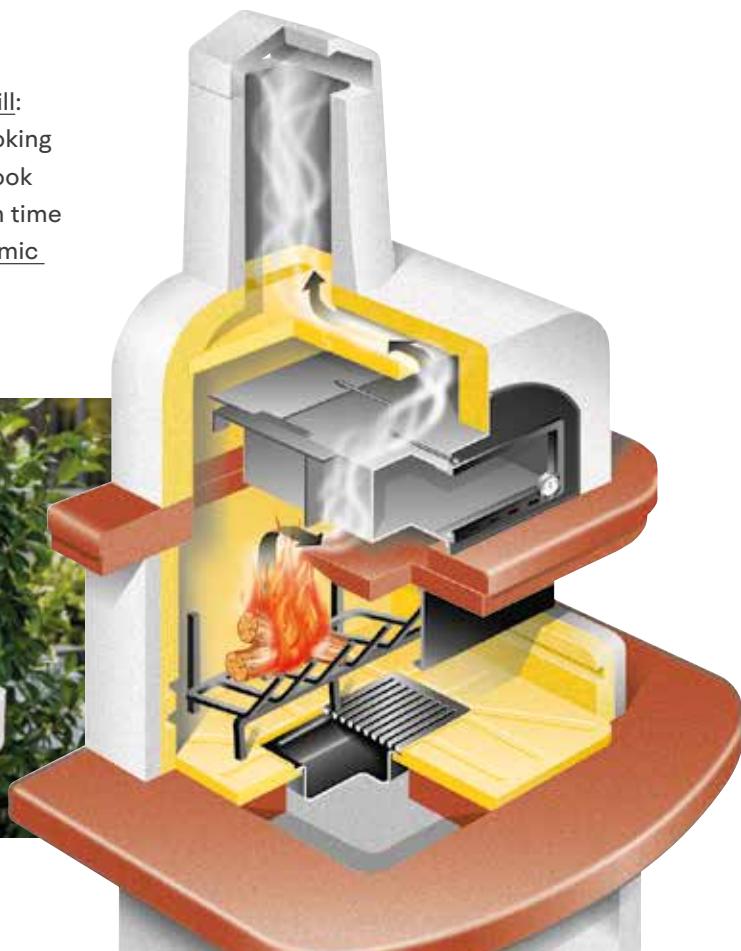

1. REFRactory OVEN

It stores heat longer, ensuring uniform cooking results even after the fire has gone out. Our ovens are made of refractory materials and their floors comply with the CE regulation in force regarding contact with food (CE 1935/2004).

2. PATENTED STAINLESS STEEL OVEN

It works by exploiting the same fire that heats the grill: the outgoing flue gases completely surround the cooking chamber, heating it to the perfect temperature to cook any food. The oven will be hot and ready to use each time the barbecue is lit. The door is in cast iron with ceramic glass and a thermometer.

extend the barbecue and create a customised kitchen

Cookie kitchen line

As of today, many of our cement barbecues can be integrated with modules from our kitchen Cookie Line to create a real outdoor kitchen, even over time. The options are almost endless. Ask our design department for a project tailored to meet the requirements of your customer.

above: Cookie kitchen line with a polished grey top and anthracite doors

on the right: Cookie kitchen line with a Gallipoli barbecue, with a polished red top and stainless steel doors

Lots of customising options

All our modules are made of cement mix with polished, grey or red, granite-effect Marmotech tops. Some modules can even become storage units with metal doors available in the following colours: stainless steel, anthracite and peach. It's all a matter of taste: help your customer choose the arrangement and finishes that best suit his requirements.

on the left: Cookie kitchen line with Levanzo barbecue with a polished grey top and stainless steel doors

below: Cookie kitchen line with Gallipoli barbecue with a polished red top and peach doors

the outdoor kitchen takes shape, one module after another

There's a module for every need: just guide your customer in his choice.

He doesn't even have to decide straight away! He can create his perfect space by extending and improving his Palazzetti outdoor kitchen one piece at a time.

1. CUPBOARD MODULE

2. WORKTOP MODULE

The cupboard module can accommodate firewood, a gas cylinder or other utensils while the worktop module with doors can be used as a practical larder.

3. SINK MODULE

Provided with a stainless steel sink and a standard-supplied mixer tap, the top compartment can be shut by doors.

4. SPLASHBACK

All our models can be completed by a splashback.

5. GAS HOB MODULE

A module with a 2 or 4-burner, stainless steel hob. The 2-burner version is fitted with a practical stainless steel lid. The top compartment can be shut by doors.

6. CORNER MODULE

7. HOT COAL MAKER

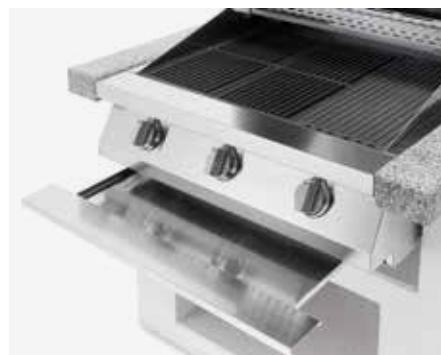

8. COUNTERTOP BARBECUE

The first module is designed to create large quantities of hot coals at the front, while the wood is loaded from the back. The second is a barbecue module without a hood, designed to stand on module with a worktop and provided with slabs and grills.

9. GAS GRILL MODULE

Module with a professional gas cooking system. The structure is entirely in very thick 18/10 stainless steel. Provided with 3 or 4 burners, grills, an enamelled cast iron griddle and a lid with an integrated thermometer (optional).

10. OVEN MODULE

A wood-fired oven made entirely from stainless steel and provided with a door, a thermometer and a side firewood rack. The cooking chamber is in stainless steel and has a very thick, refractory oven floor.

Custom outdoor kitchens

Everlasting design, functionality and uniqueness.

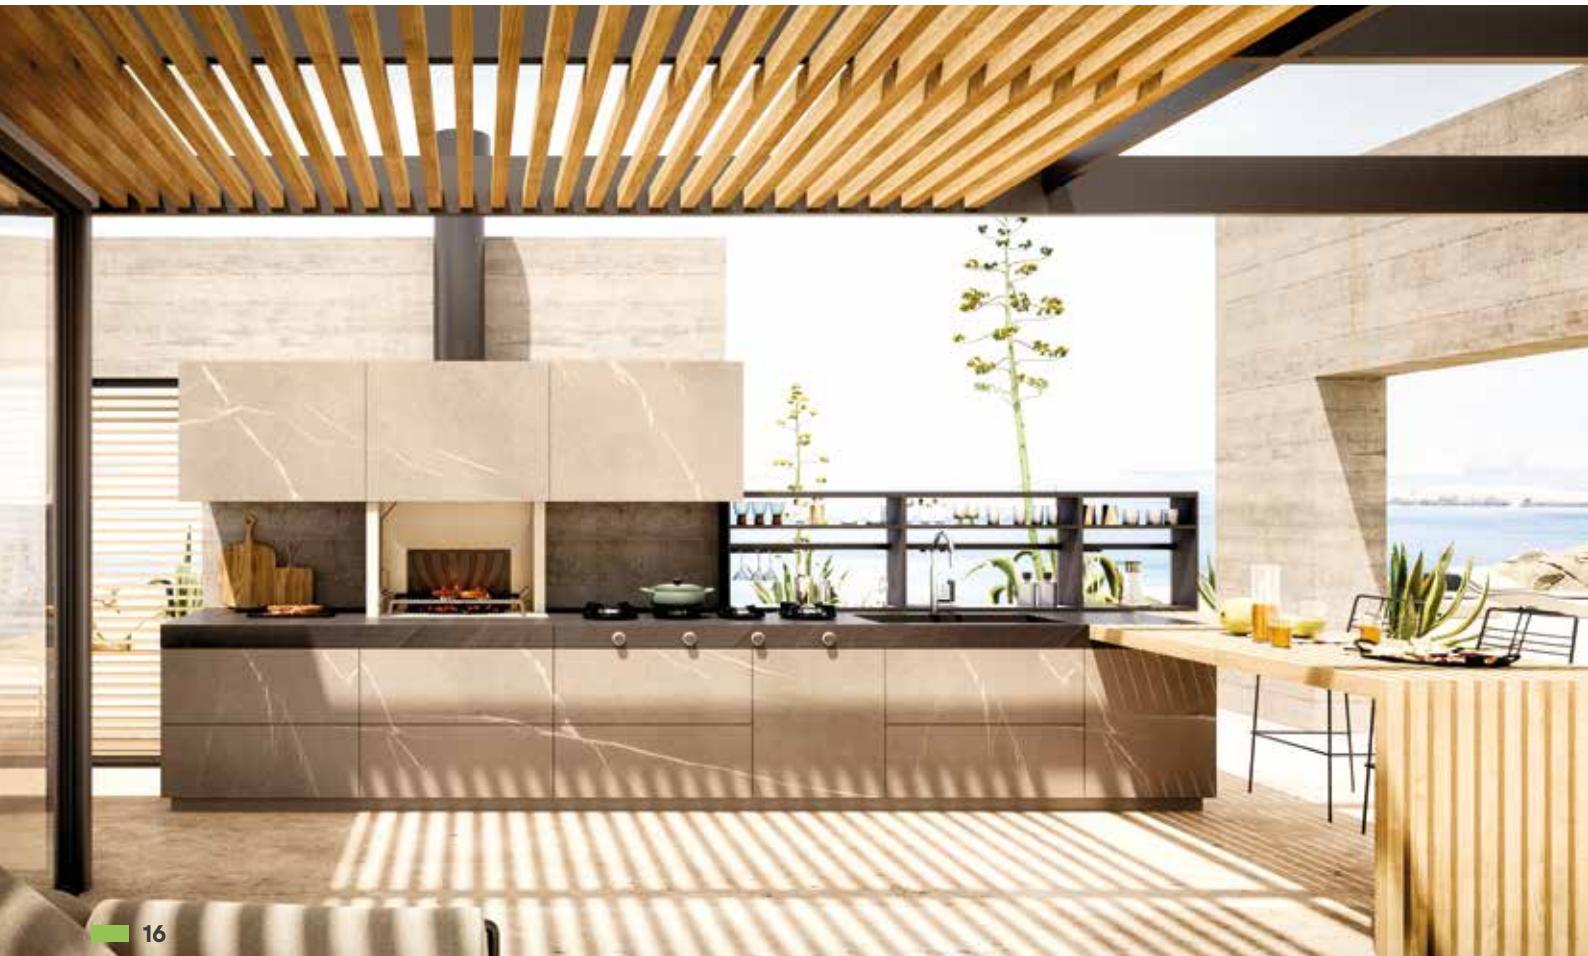

You can now offer your customers projects tailored to suit their needs. In fact, our team of interior designers can plan custom outdoor kitchens to meet any requirement, style or space.

Our open Patio fireplace will be the focus of every project but the materials, measurements and functions will differ to correspond exactly to the space, climate, requirements, desires and – why not? – the personality of your customers.

Noisy conviviality or formal spaces, a passion for barbecues, for traditional Mediterranean food or for nouvelle cuisine recipes; our custom outdoor

kitchens can handle any trend or occasion to perfection as they are designed to overcome difficult times and climates.

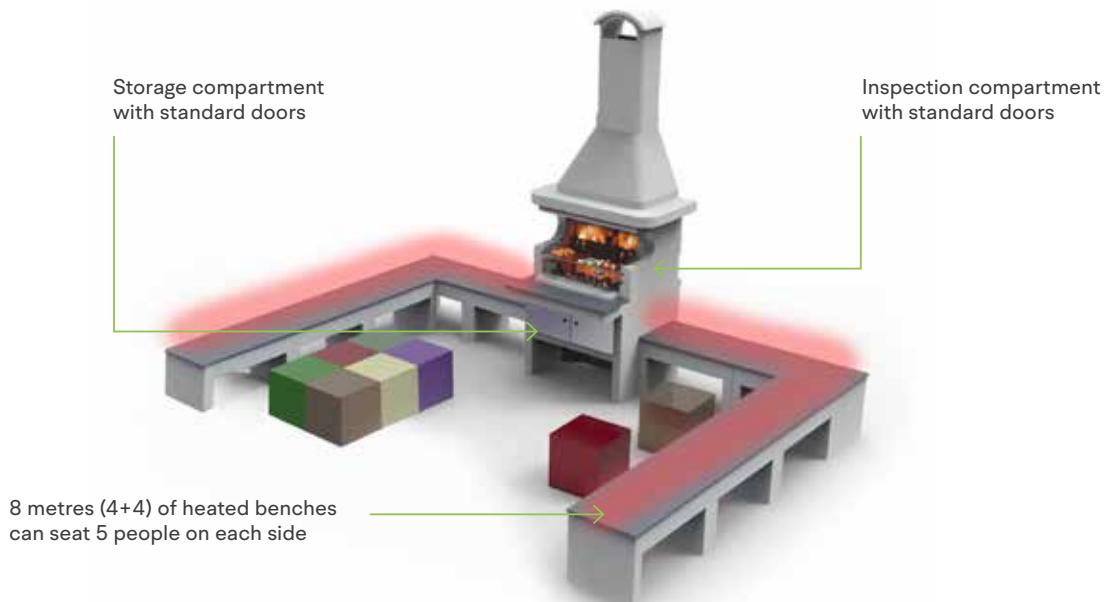

And to last practically forever.

Alegranza: All together, outdoors, sitting around the fire!

Alegranza is the barbecue designed for cooking together outdoors even when the temperature is less than perfect. Patented technology heats the seats, making them comfortable to use in any season.

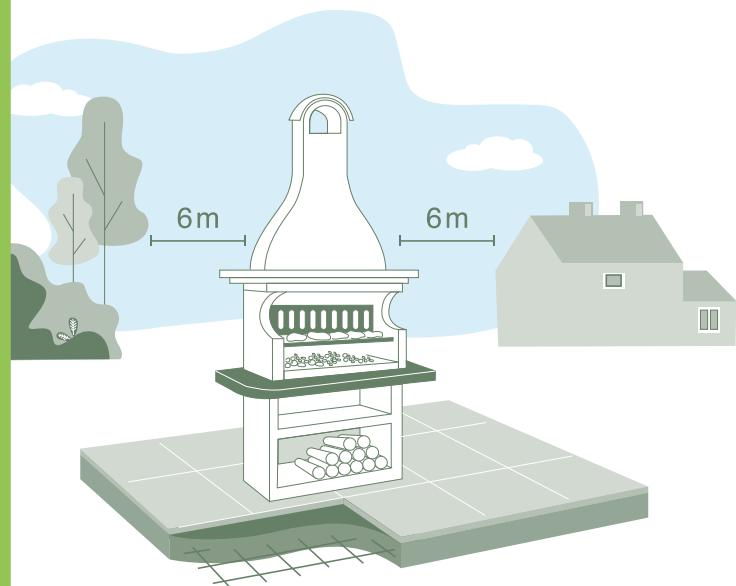

OFFER YOUR CLIENTS A CUSTOMISED OUTDOOR PROJECT THAT CAN INCLUDE A BARBECUE WITH OR WITHOUT AN OVEN, GAS GRIDDLES, COOKIE MODULES OR THE SPECIAL ALEGRANZA BARBECUE. OR A COMPLETE, FULLY-CUSTOMISED OUTDOOR KITCHEN.

assembly instructions

There are a few essential rules to follow to guarantee that our barbecues benefit from a long life.

Where should they be installed?

EVEN A SMALL BARBECUE MUST STAND ON A LARGE, COMPACT BASE, PREFERABLY MADE OF VERY STABLE CEMENT, WHICH IS NOT SUSCEPTIBLE TO SAGGING AS THIS WOULD CAUSE IT TO CRACK, AND WHICH KEEPS THE USER'S FEET DRY IN ANY SEASON.

For safety reasons and to avoid smoke issues, the barbecue must stand at a distance of at least 6 metres from trees, buildings or other vertical obstacles.

THE ASSEMBLY AND PAINTING KIT IS INCLUDED IN THE PRICE

How should they be installed?

AN ASSEMBLY AND PAINTING KIT IS PROVIDED WITH EACH PALAZZETTI BARBECUE, which includes all the materials required to install it and to apply any finishing touches as well.

THE GUARANTEE WILL BECOME VOID IF THE POSITIONING AND ASSEMBLY INSTRUCTIONS ARE NOT RESPECTED.

How about an unfinished barbecue? This is what should be done

Any minimal differences in thickness between the various parts are inherent in the nature of the material the barbecue is made of and must be corrected when it is installed. To assemble and even out the parts that will not be in contact with the heat, use THE MORTAR INCLUDED IN THE ASSEMBLY KIT. For the parts that will be in contact with the heat use the EASY FIX ADHESIVE SEALANT THAT IS ALWAYS INCLUDED IN THE ASSEMBLY AND PAINTING KIT. If the firebox is made of various parts, place the grill between the 2 side panels before securing them and wait for them to set before moving onto the other steps. The refractory barbecue floor slabs must be placed inside the firebox but not fixed to it: do not use high-resistance or quick-set cements or very strong adhesives!

Wait for the barbecue to dry (at least 4 days) before painting it. Use at least two coats of THE QUARTZ-BASED, WATER-REPELLENT PAINT SUPPLIED WITH THE ASSEMBLY AND PAINTING KIT ON THE EXTERNAL PARTS.

// example of barbecue assembly:
the barbecue shown is mass-coloured

Does the barbecue have an oven module?

Prepare the parts to be installed, re-drilling the holes that house the threaded rods.

Spread the ceramic fibre sheets over the top without using any adhesive and then stand the oven parts on top of them without fixing them.

The oven parts have a groove in their edges: insert the ceramic fibre cord and attach it using some dots of adhesive. Join all the parts together using the stay rods and tighten them moderately.

To install the door use the specific screws and apply a layer of the EASY FIX ADHESIVE SEALANT between the frame and the front of the oven.

Important

Once assembly is complete, apply the STICKER SUPPLIED as prescribed by the UNI EN 1860-1 standard in force that all Palazzetti barbecues comply with.

// Installing
a barbecue
with an oven

How should it be used?

FOLLOW THE ASSEMBLY INSTRUCTIONS FOR AS MUCH AS REGARDS THE TYPE AND QUANTITY OF FUEL TO USE.

Ignition must always be slow and gradual until the barbecue is uniformly heated. Any micro-cracks do not alter the functionality of the product.

How should it be protected from frosty weather?

DURING THE WINTER MONTHS IT IS ADVISABLE TO PROTECT THE PALAZZETTI BARBECUE WITH OUR SPECIFIC COVER TO PREVENT CRACKS CAUSED BY FROSTY WEATHER.

How about periodic maintenance?

Cement barbecues are subject to wear as a result of use and of bad weather conditions so they must be protected from these. Once a year, it's advisable to quickly recondition the barbecue using the EASY FIX SEALANT and the specific quartz-based paint or the PROTECTIVE TRANSPARENT LIQUID SUPPLIED WITH THE ASSEMBLY AND PAINTING KIT.

// FIREWOOD KIT (OPTIONAL):

the kit features a space for housing the fuel (wood or charcoal) which is accessible by opening the door at the front.

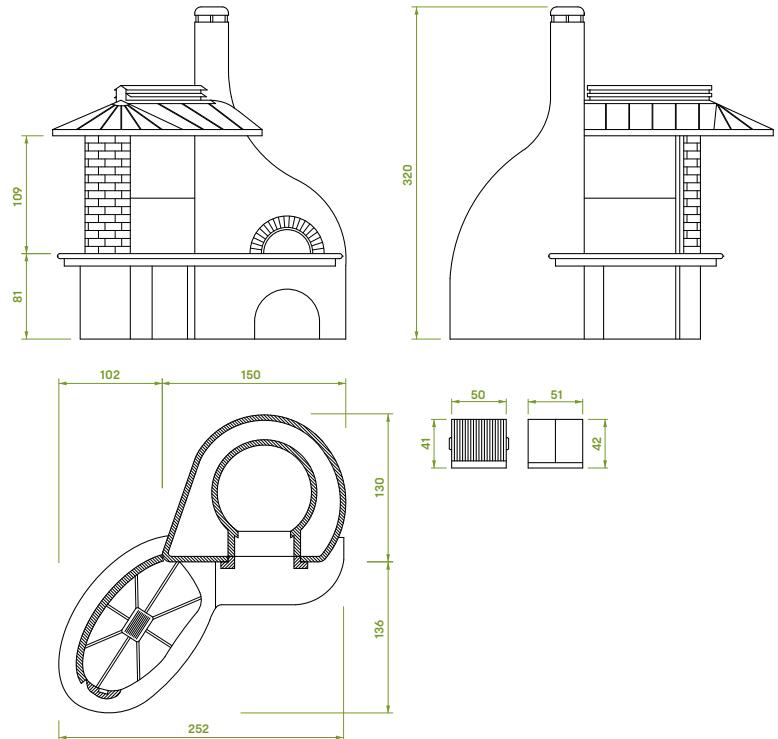

The firewood holder is designed to ensure optimal fuel ignition: it comes with a special place for firelighters that can be lit from outside using a match.

The firewood holder also eases the production of hot coals which can be made to fall directly onto the grill area by pulling the bottom panel out using the specific tool. Its special shape prevents the heat from reflecting on the food and on the cook while conveying the combustion fumes directly to the chimney.

INCLUDED IN THE PRICE

Hot-coal maker module

Designed for those who need to produce large quantities of hot coals for lengthy barbecuing sessions, it lets you load firewood from the back at a safe distance from reflected heat while also allowing on-going hot coal production at the front without taking up any of the barbecue's cooking space. It's made from unpainted refractory cement mix and contains a double-walled combustion chamber entirely in very thick stainless steel.

code	description	price
809810590	Barbacoa Oreste*	6,250 €

- Elegant and functional outdoor workstation, perfect for placement outdoors or under a porch
- Lava stone cooking plate; heats up in a few minutes and is ideal for cooking meat, fish, vegetables, and cheese without the need for additional seasonings
- Oven with a Thermofix interior; suitable for both indirect and direct cooking
- Combustion chamber easily accessible via the door, allowing for easy ignition and flame management, capable of heating both the plate and the oven simultaneously (in indirect mode)
- Smoke flow diversion valve; for heating only the plate or both the plate and the oven (in indirect mode)
- Product size
170x83x260 cm - 410 kg
- Packaging
180x90x160 cm - 470 kg

// Cooking method. The slab and the oven are simultaneously heated by a single fire.

→ The fire in the drawer heats the lava stone slab which quickly reaches the perfect temperature for uniform cooking results. Thanks to a dedicated circuit, the exiting flue gasses are then made to completely surround the oven that reaches a temperature of about 280°C in 25/40 minutes.

→ Oreste is also designed to cook bread and pizzas on an open flame. Simply light the fire directly in the oven which reaches a temperature of 380° C for a perfect pizza.

By controlling the combustion air and the exiting fumes, it is possible to achieve optimal temperature and cooking time management for quick or slow cooking methods using the smallest possible quantity of firewood.

range of Patio barbecues

the Patio range in detail

Patio is an open fireplace that can be installed indoors or outdoors.

STRUCTURE

The firebox walls are very thick and are available in refractory material or in cast iron. The firebox offers a remarkable heat accumulation capacity and guarantees unlimited product durability. It is completed by a large ash pan that is removable for easy cleaning.

SAVINGS

Patio is a very affordable product thanks to its easy installation and assembly.

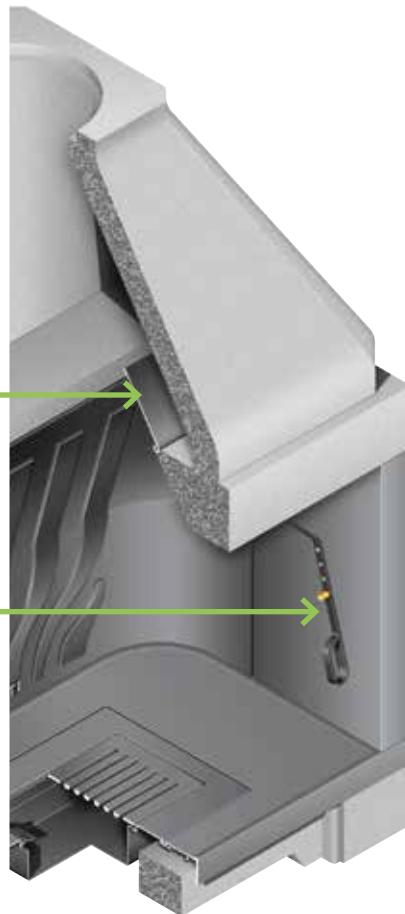

IT COOKS

Palex is the perfect firebox for cooking on a wood fire using a grill, a griddle or a spit: all the openings of our models are particularly large to accommodate the cooking utensils that make even the life of the most amateur cook easier.

HEAT EXCHANGER

The special fretting on the outside of Patio fireboxes has a triple purpose: it evenly distributes heat over the entire surface, remarkably increases the exchange of heat and makes the firebox sturdier.

FLUE DAMPER

It is turned on by a specific control and adjusts the chimney draught to optimise the firebox's efficiency.

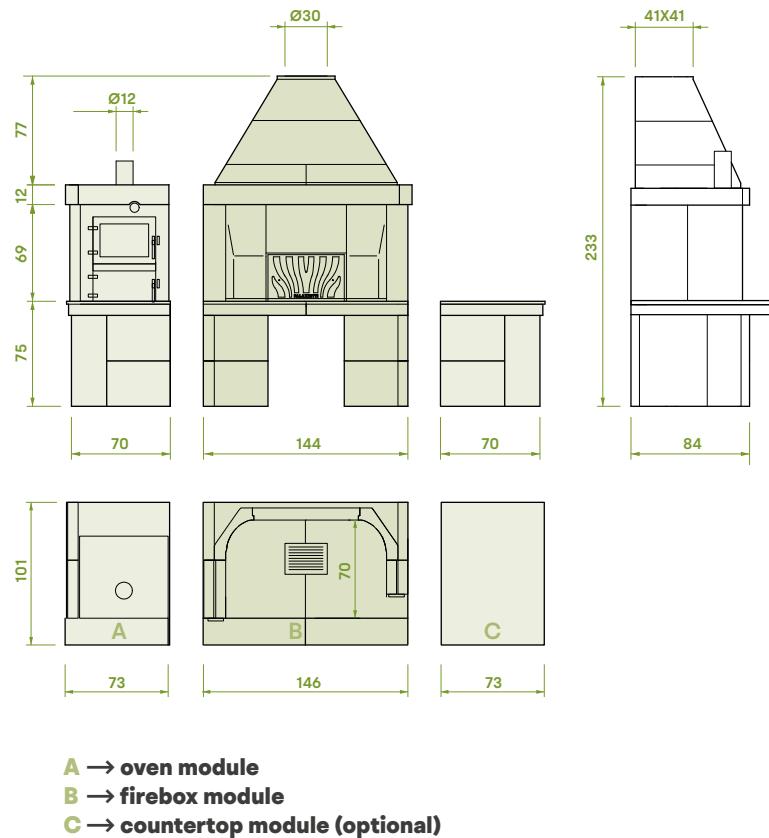

code	description	price
802200310	Linosa open firebox	2,600 €
802200320	Linosa open firebox with oven*	4,970 €

- A large open firebox* ideal to accommodate generously-sized grills and rotisseries

*Hood cladding not supplied and countertop module as optional.
- The firebox floor (116x70cm) is provided with an ash pan to favour combustion and make it easier to clean away the hot coals
- Countertop and worktop made of Cemipiù, an innovative material developed for outdoor use
- Cement mix structure. Must be painted
- Flue gas outlet Ø 30 cm
- **Grill and oven module:**
 - firebox paired with an indirectly fuelled wood-fired oven; food does not come into direct contact with ash and smoke;
 - superior insulation to reduce wood consumption;
 - 42x50 cm oven chamber with one oven tray position and a refractory surface.
 The oven can be installed on the left or on the right.
- **Countertop module (optional):**
 - large countertop to make cooking even easier
- Product size
225x100x234 cm - 1800 kg

Sit-on Patio firebox modules

Patio fireboxes must sit on a sturdy base which is why Palazzetti supplies specific, cement mix modules to support them. The modules are precisely designed to accommodate each Patio module and are available in two different heights: 35 and 70 cm.

stainless steel bio grill

A fundamental aspect of perfect barbecuing is that liquids and fats should not drip onto the underlying hot coals as this would cause dangerous flares and burn parts of the food. Choosing grills, like our stainless steel Bio grill with cool-touch Bakelite handles, with semi-circular cross-sections and a drip pan to collect cooking fats is useful to avoid these inconveniences.

version	code	price
76x37 cm with bakelite handles	893620270	85 €

lux grill

To prevent the food from burning or coming into contact with combustion fumes while it is cooking, it's important to make sure liquids and fats don't drip onto the underlying hot coals. Our Lux grill, made entirely of very thick stainless steel with wooden, cool-touch handles, has a semi-circular cross-section with a drip pan to collect fats.

GENERAL CONDITIONS OF SALE

Prices - Validity

This price list comes into force on May 5, 2025 and cancels and replaces all previous editions. Prices are intended for deliveries EX-WORKS and are net of VAT.

Orders

Any order received by Palazzetti Lelio S.p.A. (by post, fax, email or through a representative) implies acceptance of these conditions of sale. Orders shall only be deemed accepted upon issue of our order confirmation. Verbal orders are not accepted. Requests for total or partial cancellation of an order shall be accepted at the discretion of Palazzetti Lelio S.p.A. Management, which reserves the right to request reimbursement of any sustained costs.

Payment

Failure to observe the agreed conditions of payment gives Palazzetti Lelio S.p.A. the right to charge interest at the current applicable interest rate plus relative costs and charges. Cheques and money orders issued by the Customer shall be considered as payment only upon effective encashment.

Retention of title

All supplied goods shall remain our property until full and complete collection of payment.

Delivery - complaints

Upon receipt of goods, the Customer must check that the number of packages and nature of goods correspond with the information supplied on the delivery note with the Courier. Packaging must be complete, undamaged, unaltered and not tampered with in any way. Any discrepancy in the number or content of the packages must be immediately queried with the Courier by writing "accepted with reservation because n°... packages missing or wrong product" on the delivery note and communicating the discrepancy by email to Palazzetti Lelio S.p.A., within eight calendar days of delivery. Visibly damaged products must be neither accepted nor unloaded and must be refused, always indicating the reason for rejection on the delivery note. Any concealed damage not visible upon delivery must be communicated with a description and photographic documentation within eight days of its discovery. Any notice that does not fall with the above terms and/or communicated by any other means shall not be considered. Once the delivery note has been signed, the Customer may no longer submit any further complaint regarding the exterior conditions of goods delivered or the number of packages received. Any complaint regarding part of the goods delivered or single shipment of goods shall have no bearing on the rest of the order, nor shall it affect payment of other goods received and not queried within the specified time. In the event of a temporary or permanent impossibility of delivering goods for reasons beyond our control, such as conditions of force majeure including (but not limited to) war, government restrictions, fire, flood or other natural disasters, strikes etc., we shall be relieved of our obligation to deliver for the entire duration of the impediment and for the entire duration of ensuing effects, as well as any responsibility to the Customer for damages due to the delay.

The manufacturer is not responsible for any errors or inaccuracies contained in this price list and is entitled to make any modifications to its products deemed necessary for technical or commercial reasons at any time and without giving prior notice.
